Crea7ion by GlammFire

The line of perfection

It is designed to emphasize the unique and continuous expressions of the flame. Crea7ion is an electronic system with an innovative technology, which stands out by its simple design, practical functionality and low consumption. Its structure and solidity ensure a perfectly safe and linear flame, while its ecological character keeps a respecting commitment to the environment, contributing to a pleasant comfort and well-being.

Crea7ion can be integrated into virtually any environment or in different types of structures (eg.: furniture or masonry). A system totally safe for projects led by architects, decorators and interior designers.

Control the pleasure of your fire.

Did you know:

Symbology of 7

The 7 cycles of the earth—4 lunar cycles with duration of 7 days.

The origin of the current schedule.

The cell renewal of the human body (every 7 years).

The 7 holes of the human face.

The fullness, the perfect order.

The regulatory measure of the universal cohesion: 7 planets, 7 deities, 7 metals, 7 musical notes, 7 colours, 7 days a week, 7 chakras, 7 deadly sins and 7 virtues that are opposite to those sins.

The symbol of the announcement of a change.

Simplicity

The new ingredients introduced by Crea7ion allow it to adapt to different surroundings, where the performance of its flame promotes the aesthetics of the places.

Simple and easy installation;
Does not require a chimney, ducts or tubes;
Does not produce smoke, dirt or odours;
Does not need electrical installation and connexion;
Simple and practical maintenance;
It is guaranteed to adapt to indoor and outdoor areas.

Intelligence

Crea7ion brings dynamism and functionality. Its dimensional structure expresses the skill of GlammFire to develop innovative products with a better functional performance. The intelligent placement of the components optimizes the performance of Crea7ion, allowing a practical and simple handling.

Crea7ion—Electronic:

Remote control;
Electronic ignition via remote control;
Control intensity of the flame via remote control.

Crea7ion—Mechanical:

Mechanical ignition via lighter;
Control intensity of the flame via valve knob.

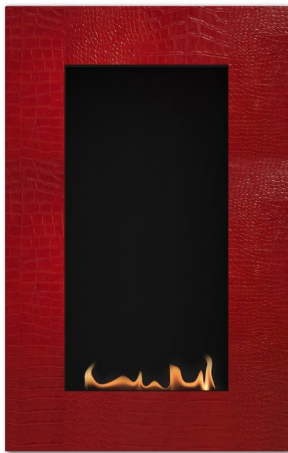

Performance

An experience of unparalleled comfort.

The performance of Crea7ion is faithful to innovation that promises. Its characteristics give it an excellent efficiency: the tank of 3 litres, in combination with a flow control pump, delivers a precise quantity of fuel at various points, suitably located in the burning zone, thereby providing an extraordinary performance.

Linear and uniform flame;

The quantity of fuel sent to the burning zone is controlled via remote control - flame adjustment.

Customization

The most substantive feature of Crea7ion shows all the essence and functionality of the revolutionary system.

With a strong adaptive and versatile capacity Crea7ion incorporates a variety of electronic components which further facilitate the use of your decorative fireplace, allowing a relaxed and comfortable interaction in flame control.

Versatility;

Tank:

- 2 litres

- 3 litres

Combustion fire line:

250mm/ 400 mm/ 600 mm/ 800 mm;

Adaptable system to any type of bioethanol decorative fireplaces:

_Wall fireplaces

_Floor standing (only on model range "Muble")

Economy

Embodying a new technology of combustion Crea7ion reduces the bioethanol consumption to its maximum, through an internal system of regulation of the flame, which allows people to enjoy all its potential at a lower cost.

Fuel Management;
Narrow combustion fire line - the combustion takes place with a minimum fuel quantity;
Low power consumption - lower cost;

Autonomy (hours):

_ 250 mm (with 2 litres) —6:30 hours

_ 400 mm (with 3 litres) —6 hours

_ 600 mm (with 3 litres) —4 hours

_ 800 mm (with 3 litres) —3 hours

Safety

The strict technological security ensures a high and effective performance, being an essential feature in the design of GlammFire products. And you feel it! Incorporating the best technology Crea7ion provides unique sensations of comfort and well-being.

Control the fuel level in the tank;
The narrow combustion fire line and minimum fuel quantity used in the combustion enable a fast extinction of the flame;
Optimisation of the combustion process – only fuel vapour generated is burnt;
Tank independent from the combustion fire line.

Ecology

The Eco-Technology of Crea7ion promotes an efficient use of bioethanol as a renewable energy source, 100 % green, which respects the environment and does not contribute to the global warming. Hence the name "bio" ethanol.

The pure ethanol contains 96% vol. ethanol and 4% water.

Resulting from its combustion are released only carbon dioxide (CO₂) and water (H₂O). At first glance this may cause you some concern and insecurity. However, if you think about it, these are the products produced by our breathing. This is one of the reasons that makes the combustion of bioethanol clean and complete.

As usually bioethanol decorative fireplaces require no chimney or pipes, most of heat generated by the combustion of bioethanol stays on the room. This is another reason that makes the combustion of bioethanol quite efficient.

Technical Characteristics

Ignition Mode: Electronic—Remote Control | Mechanical—Lighter

Fuel: Liquid bioethanol

Structure | Material: Stainless steel

Auxiliary power: Batteries AA (4x1,5V)

Combustion fire line (mm) | Power (kW)

Combustion fire line (mm)	Power (kW)
250	1,8
400	3
600	4,5
800	6

Recommended minimum area (sqm)

Combustion fire line (mm)	Power (kW)	Recommended minimum area (sqm) (to 2,45 m of ceiling height)
250	1,8	11
400	3	19
600	4,5	28
800	6	38

Characteristics of tank

Capacity (l):

- 2 litres
- 3 litres

Control the fuel level in the tank

Tank independent from the combustion fire line

Autonomy (h)

Combustion fire line (mm)	Capacity (l)	Autonomy (h)
250	2	6:30
400	3	6
600	3	4
800	3	3

Accessories supplied:

Lighter
Funnel
Mug
