

Product information

VAUNI ethanol fireplace GLOBE white

Art.Nr.: VNI109 / GTIN: 7340208300780 / manufacturer: [Vauni](#)

3.700,25 €

Regular retail price ~~3.895,00 €~~ (you save 194,75 €)

incl. 19% VAT incl. Shipping

 Delivery time: 4 - 5 weeks

Product information

Dimensions / Technical data:

Approx. dimensions: Ø 60cm, height 90cm, depth 58cm

Combustion chamber: stainless steel with absorption function, capacity 2 liters

Heating value approx.: 2 KW - burning time approx. 5-6 hours, flame size adjustable via regulator

Body: Cast iron black or white, heat-resistant lacquered

Inner, round plate optional:

Cast iron almond matt lacquered (standard)

Shaped concrete from MBJ-Design in mystic graphite

Shaped concrete from MBJ-Design in Mystic Sand

Properties of the inner, round concrete top:

High stain resistance

High scratch resistance

Maximum fire and heat resistance

High color resistance

High UV radiation resistance

Excellent frost and thaw resistance

Low water absorption

High abrasion resistance

Easy cleaning thanks to non-porous surface

Floor stand: Cast iron base with felt glides

Product description

Vauni Globe fireplace in black or white - stylish design meets uncompromising function

Product information

The Vauni Globe in classic black or white impresses with its purist aesthetics and blends harmoniously into any living environment - from urban loft to modern country house. Its spherical shape is not only a visual highlight, but also offers flexible alignment of the heat source thanks to its rotatable body. Ideal for anyone looking for a high-quality designer fire without the need for structural alterations.

As a free-standing bioethanol fireplace without a chimney, the Globe requires no installation and can be placed anywhere - whether in the living room, conservatory or on a sheltered patio. The integrated high-end burner burns bioethanol cleanly, odorlessly and soot-free. The flame size can be infinitely adjusted to create the desired atmosphere at any time - romantic or lively, warm or discreet.

A minimalist look - perfect technology

The Globe is equipped with a safety-optimized bioethanol burner with absorption core and leakage protection - for maximum safety and efficiency. The burner surround can be selected in either black cast iron or exclusive cast concrete from MBJ Design (in Mystic Graphite or Mystic Sand) - an impressive overall look is also created in combination with the classic colors.

The matching base with floor protection allows effortless turning without scratching - perfect if you want to redirect the heat spontaneously. A raised base is also available as an option for even more presence in the room.

Vauni Globe - minimalism with soul

Each globe is made by hand in Sweden and is unique. The matt black looks elegant and striking, while the clear white radiates lightness and Scandinavian freshness. Both versions go perfectly with modern, minimalist or monochrome furnishing styles. And best of all: Globe can even be used outdoors - although indoor storage is recommended.

Experience the perfect combination of design, function and sustainability. With the Vauni Globe in black or white, you can bring an iconic piece of fire culture into your home - without any smoke extraction, without any effort.

- Round bioethanol design fireplace without a flue
- Available in classic black or white - timeless and stylish
- Freestanding, rotatable and can be used immediately without installation
- Clean combustion without soot, smoke or ash
- Infinitely adjustable flame for individual heat
- Highly safe burner with leakage protection and absorption
- Choice of black cast iron or MBJ cast concrete burner insert
- Matching base with floor protection - also available in a raised version
- Handmade in Sweden - each piece is unique
- Can also be used outdoors (indoor storage recommended)

Functionality

The traditional wood-burning fireplace - loved and warming at all times. Heating the house with a crackling fire is nothing new. The bioethanol fireplace - a novelty in this field - is considered in many places as an equal alternative to the wood fireplace. We think: He is even the better alternative, because he saves not only the purse, but also the environment. You could also say: an ethanol fireplace has numerous advantages.

Efficiency of the fireplace with bioethanol or wood: A big advantage of the ethanol fireplace is that the waste heat of the wood fire is omitted. Instead of disappearing largely through the chimney, the heat goes directly into the room where the fireplace is located, with an efficiency of 100%. A wood-burning fireplace, on the other hand, has an efficiency of only 70%. The Vauni ethanol fireplace achieves a maximum heat output of 2-3 kW. The heat is delivered directly and selectively, and can thus serve as a supplement to existing heating systems. In most cases, a Vauni produces just the right amount of heat for a cozy supplementary heating system. With ethanol fuel for the Vauni fireplace, the heating value is nearly four times that of wood. Thus, a Vauni ethanol fireplace is significantly more energy efficient than a wood fireplace for the same amount of heat. Choosing an ethanol fireplace also

Product information

avoids the climate pollution and air pollution that wood fires can cause not only to the surrounding area, but as far away as the Arctic.

Saving money and time: choosing the right fireplace can save even more money. If you choose an ethanol-fueled fireplace, you are only buying the fireplace and the fuel. On the other hand, if you invest in a wood-burning fireplace, a building permit for a chimney must first be obtained, then the fireplace and chimney must be purchased and installed and approved. In addition, there are the costs of sweeping and regular purchase of wood. The price of installing a wood-burning fireplace is almost 2.5 times the price of buying and simply putting up a Vauni fireplace. Plus, with an ethanol fireplace, you save time and space. There is no need to store wood, and the fire can be lit easily without the need for kindling cubes, newspaper or the like. The ethanol fireplace warms directly with high power!

Bioethanol - a natural product: Bioethanol is not only a cheaper fuel than wood for a cozy additional heating. Bioethanol is also a clean and renewable natural product. Heating with your Vauni fireplace is therefore climate and environmentally neutral. Our Vauni Ecoflame Premium and Vauni Ecoflame Supreme fuels are 100% environmentally friendly and renewable. The bioethanol is made from potatoes, grain, corn, cellulose and similar raw materials. The combustion process is completely clean. Only extremely small amounts of carbon dioxide and water vapor are formed during heating. In fact, not much more carbon dioxide is emitted than when you exhale. When you heat with a fuel from Vauni, you can be sure that the combustion will take place without soot, smoke or ash. That is why Vauni fireplaces and bioethanol burners do not require a chimney - an active choice for environmentally friendly heating. But also for a fireplace with high performance.

Ethanol - the fireplace with the best performance: the bottom line is that the cost of your cozy additional heating per season can be practically halved if an ethanol fireplace is used instead of a wood-burning fireplace. With a bioethanol fireplace from Vauni and bioethanol as fuel, you will heat your rooms in an innovative and environmentally friendly way. The ethanol fireplace - just as popular and warming as the wood fireplace, especially gentle on nature and your wallet.

TÜV standard

DIN 4734 applies to all fireplaces operated with liquid fuels. These are decorative devices that produce a flame using a liquid or gel-based ethanol fuel. The standard was developed by the working group "Decorative Fireplaces & Ethanol Fireplaces," which includes renowned German and international manufacturers, in collaboration with the HKI Industrial Association (House, Heating, and Kitchen Technology). The DIN specifies requirements for the design, operation, and labeling of ethanol fireplaces. Another aspect of standard 4734 concerns the instructions and in-house production control requirements. Some manufacturers, such as GlammFire and Vauni, already offer safe ethanol fireplaces and burners that comply with this standard.

about Vauni

Vauni is a Swedish manufacturer of high-quality ethanol fireplaces and burners with a sophisticated design. Vauni's head office is located in Gothenburg. The premium brand manufactures high-quality ethanol fireplaces and stainless steel combustion chambers with a sophisticated design. All Vauni products are designed, developed and produced in Sweden. They are made of Swedish steel in Småland and have a high product quality.

The stainless steel combustion chambers with absorption function bind the liquid ethanol and ensure unparalleled safety. Vauni's burner is unique in the way it absorbs fuel. Combustion is slow, as only the fuel vapors burn. This makes Vauni fireplaces suitable for domestic use as well as for yachts and houseboats.

Product information

Vauni fireplaces run on bioethanol and generate heat in a modern and environmentally friendly way. This means that the combustion is completely clean and, like the air you breathe out, produces only small amounts of carbon dioxide and water vapor.

Bioethanol & tips

Bio-ethanol 96.6% in 1 liter bottles: Perfect for table fireplaces. As diverse as our tastes, ethanol fireplaces have become indispensable in many households. The 1 liter bottles are perfect for occasional users or first-time users who want to familiarize themselves with their ethanol fireplace or our liquid bioethanol fuel. **How long does 1 liter of bioethanol last?** How long your own bioethanol stove burns with one liter of biofuel depends on various factors. Both **Ambient temperature, weather conditions, flame size as well as draughts** influence the possible length of the burning time. One liter can last for up to two hours with a high flame setting. The filling quantity also plays an important role. The more bio-ethanol is poured in at once, the faster the total quantity burns down. Conversely, the fire lasts longer if smaller quantities are used. Two liters are sufficient for up to three hours, but a half liter can burn for up to one and a half hours under ideal conditions. In strong draughts, the burning time is shortened in the same way as with wood or coal. Complete combustion - no undesirable combustion effects such as smoke or unpleasant odors and no combustion residues such as soot or ash. The bioethanol fuel, which consists mainly of bioalcohol, burns almost completely without producing smoke or odors. The gas produced during combustion (the carbon dioxide and water vapor mixture also exhaled by humans) is completely harmless to humans. No additional ventilation is required for normal ventilation of the rooms. Depending on the room temperature and whether the windows are open or closed, the bio-alcohol should be allowed to cool down for approx. 10 - 20 minutes after operating a bio-fireplace or bio-fireplace. When refilling, make sure that no ethanol is poured next to the fireplace. If something does go wrong, the ethanol must be removed before lighting the fireplace, e.g. with absorbent kitchen paper. To further increase safety, it is advisable to wait a short time until the bioethanol residue has completely evaporated. Burning bio-alcohol with an open flame requires as regular an air supply as possible (efficient room ventilation). In residential units (with a smaller cubic volume), a slightly open window is sufficient. A bioalcohol fireplace does not require approval from the chimney sweep or any other legal regulations or structural changes. A bioalcohol fireplace can therefore be installed and operated in any room of the house or apartment, regardless of the domestic conditions.
